Nadav Cohen

Software Engineering Student, Technion · Haifa, Israel

nadav167@gmail.com · 050-4217070 · GitHub · LinkedIn · Portfolio & project trailers

Summary

Fourth-year Software Engineering student at the Technion, looking for a student position in software development or QA automation. I build and ship full-stack products end to end: three live apps with data pipelines, PostgreSQL backends, CI automation and LLM tool-use agents. Background in manual QA for medical devices at Biosense Webster.

Projects

Ma Roim (מה רואים) – bilingual movie & TV catalog with an AI recommender Live · GitHub

Python, JavaScript, PostgreSQL (Supabase), GitHub Actions, Vercel, Claude API

- Built a Python data pipeline that merges Wikidata, IMDb datasets, TMDB and Wikipedia into a catalog of ~58,000 US and Israeli movies and series, with English/Hebrew titles, posters, ratings, cast and streaming availability.
- Automated a weekly rebuild on GitHub Actions that refreshes the data, loads it into Supabase (PostgreSQL) and triggers a Vercel redeploy, with API responses cached between runs.
- Wrote entity-matching rules for Hebrew vs. English titles and same-name conflicts, routing ambiguous cases to a manual-review file instead of guessing.
- Added an AI chat (serverless endpoint) where an LLM recommends titles by calling database search tools, so it only suggests titles that exist in the catalog; includes auth and per-user daily limits.

Pitron Shetach (פתרון שטח) – map of every camping and night-parking site in Israel Live · GitHub

TypeScript, React Native (Expo), Node.js/Express, PostgreSQL + PostGIS, Leaflet, Claude API

- Cross-platform app (iOS, Android, web) from one codebase, Hebrew RTL with English toggle; npm-workspaces monorepo with a layered Express API (routes → controllers → services).
- Built scrapers and importers (Puppeteer, Cheerio, OpenStreetMap) that collect, translate and de-duplicate ~400 campsites, with geospatial queries in PostGIS.
- Built an AI trip-planning agent that uses tools to fetch site details, find nearby places and save itineraries, with accounts and row-level security in Supabase.

BoredGames – real-time multiplayer games PWA (in progress) Live · GitHub

JavaScript, Firebase Realtime Database, Firebase Auth, Service Workers

- Installable web app for playing with friends or against bots: nickname or Google login, friends, game invites and stats, synced live through Firebase.
- Implemented the full game logic for Taki, the Israeli card game, for 2–8 players with bot opponents, as a pure rules engine separate from the UI.

Education

B.Sc. in Software Engineering, Technion – Israel Institute of Technology 2023 – present

Fourth year; expected graduation early 2028. *Relevant coursework:* Operating Systems, Algorithms, Data Structures, Object-Oriented Programming, Computer Architecture, Network Security, Introduction to AI, Theory of Computation (89), Numerical Algorithms (91).

Experience

Manual QA Tester, Biosense Webster (Johnson & Johnson MedTech) Yokneam · 02/2022 – 11/2022

- Tested cardiac-mapping and ablation systems used worldwide to treat arrhythmias, under regulated medical-device standards.
- Wrote and executed test cases and reported defects, working with developers, QA engineers and system engineers.

Technical Skills

Languages: C, C++, Python, TypeScript/JavaScript, C#, SQL

Web & mobile: React Native (Expo), Node.js/Express, HTML/CSS, PWAs

Data & cloud: PostgreSQL, PostGIS, Supabase, Firebase, Vercel, REST APIs, web scraping

Tools: Git, GitHub Actions (CI/CD), Linux, LLM APIs and tool-use agents

Military Service & Languages

Bureau Manager, "Latzad" Unit, Israeli Air Force – supported two lieutenant colonels; managed schedules, logistics and cross-department communication.

Languages: Hebrew, English
